

There's nothing easier than building a site with us!

All you have to do to build a website is:

1. to choose a design template;
2. choose functional site modules;
3. and site hosting.

Choosing Design

You can choose your personal design from plenty of templates of various categories developed with regards to many years of work. All designs are user-friendly and pre-set for your needs.

If you want to choose a design template go to <http://www.esitesbuilder.com/en/web-site-design-templates/index.html>.

Choosing Modules

Decide what functions your site will perform.

For each type of site we've selected the most used modules. But you can add anything else to the standard set of modules.

If you want to choose additional modules go to following link <http://www.esitesbuilder.com/en/build-website/index.html>.

Choosing Hosting

We offer you an end-to-end solution giving you an opportunity to host your site on our high speed server.

In case if you have a personal server or you want to host your site on any other server, you can install your installation package on any server meeting minimum requirements of our system, which are:

- ✓ web-server Apache 2;
- ✓ database management system MySQL Server 4.1 and higher;
- ✓ active server pages language PHP version 4 or 5 (**must include following modules: php_mbstring, php_gd2, php_mysql**).

You can learn more about our hosting, tariff plans and other on the following link: <http://www.esitesbuilder.com/en/compare-products/index.html>.
